

ULTRA-TWIST(TM) - A325 Strength Blind Bolt

A twist-off blind bolt, called Ultra-Twist(TM), is a recently developed structural steel fastener which meets the tensile strength and tension requirements of the A325 Specification. It is used for joining structural steel members where there is access only from one side such as in joints between tubular sections. The Ultra-Twist(TM) bolt is available in three diameters: 3/4, 7/8, and 1 inches; and in grip lengths that range from one quarter to three inches. The Ultra-Twist(TM) fastener is easily installed in about 35 seconds with a standard electric shear wrench used for ordinary twist-off fasteners.
