

**Surface-Mounted Exposed\_Tee Ceiling Grid for Ceiling Tiles**

ACP Snap Tight Grid is a surface mounted exposed tee ceiling grid made of PVC plastic. It is designed to support ceiling tiles in new or renovation construction projects. ACP Snap Tight Grid combines the key benefits of surface mounted ceiling systems and suspended ceiling systems. The system uses only one inch of ceiling height, accepts 2'x2' or 2'x4' ceiling panel, unsnaps for easy replacement or accessibility, and, on renovation projects, reduces or eliminates demolition costs. ACP Snap Tight Grid is intended to be an alternative to 12"x12" paste-up/nail-up surface mounted tiles, drywall or plaster ceilings, and/or a replacement alternative to suspended ceiling grid systems when maximum ceiling height is critical.
