URS  
Material Logistics System**

The URS Material Logistics Solutions (MLS) group led by Reg Hunter has established a track record for quickly identifying the compelling operational needs of the URS Construction business enterprise. He uses this understanding, to select and optimize the appropriate technologies, such as Radio Frequency Identification (RFID) and provide a fully integrated system solution that enables construction to achieve next generation levels of performance.

Over the past five years Reg has been developing and deploying various process and material management solutions such as MLS-Construction. MLS-Construction is pragmatic system level approach to management and control of construction materials and assets in the capital projects industry. This highly configurable system includes a cost managed hierarchal approach to using technologies while at the same time, effectively recognizing and accommodating variability that always takes place at construction sites. MLS-Construction is being used by URS Washington Division to increase construction site material visibility, operating efficiency and loss avoidance.
