

Heat-R-Sand™: Sand and Water Heater

The patented Heat-R-Sand™ sand and water heater keeps sand from freezing and provides hot water all in one piece of equipment. The custom built to size tank can be placed on the ground or on your trailer. It is powered by a 220V outlet and has an adjustable thermostat. Fill it with water, plug it in and you are ready to have warm sand and hot water. The heat from the plat-form radiates up through the sand. Leave the Heat-R-Sand™ sand and water heater plugged in overnight and you will have warm sand and hot water as soon as you arrive on the jobsite the next morning. Your crew can be productive right away in the morning, saving a tremendous amount of labor time You no longer have to mess with propane torches. You use the electricity already provided at the jobsite instead of trying to recoup your propane costs.

Benefits:

- Heat sand and water
- Custom built to size
- Reduce labor costs
- Economical to run
- Powered with 220v
- Safer than torches
- Durable—lasts for years

The Heat-R-Sand™ performs two tasks with one piece of equipment.

Gone are the days of thawing out sand the first thing in the morning. Never worry about the dangers of using a torch. Water is heated by an element that is plugged into a 220V electrical outlet. Plug it in overnight, adjust the thermostat to desired temperature. Both the sand and water are warm or hot in the morning.
