**IBRD Response to UK  
Approval of CTF Funding for project entitled - Egypt: Wind Power Development Project  
(IBRD)**

**(see Annex 3 attachment)**

Simon,

We have revised Annex 3 (Results Framework) in the project document to include three new development impact indicators. Please see attached document. The table on arrangements for results monitoring has been updated to include baseline and target values for these indicators.

These indicators are:

- 1) Wind power supply chain development, which is expressed in dollars, indicating how much will flow through actual contracts to local businesses to help strengthen the supply chain.
- 2) Total job creation in the wind industry
- 3) Provision of energy to households, which is presented as wind energy generation divided by the average household consumption (equals households supplied with wind energy).

We would like to thank you for helping us sharpen the results framework of the project -- and also express our appreciation for the excellent reference material that DFID commissioned on low carbon development indicators, which provided very helpful guidance in selecting the indicators and measuring development impacts.

Rohit
