

UGANDA

Strategic Program for Climate Resilience

Mr. Maikut Chebet
PPCR Focal Point, Uganda
December 8, 2016

AFRICAN DEVELOPMENT
BANK GROUP

Outline of the Presentation

1. Country context
2. SPCR preparation Process
3. SPCR Overview
 - Objectives
 - Key thematic areas
 - PPCR investment areas
4. Theory of Change
5. Benefits of Synergies between the SPCR and the FIP
6. Next Steps in the PPCR Process
7. Concluding Remarks

1. Country Context – general & climate

General

- Landlocked low income country
- Fast growing population of approx.40 million in 115 districts
- Catchment-based natural resources management within 4 Water management Zones

Climate

- Mainly tropical with bimodal rainfall seasons- Mar/Jun and Oct – Dec.
- Average annual rainfall: 600–2,500 mm
- Temperatures: 16 to 31° C; and have been increasing by approximately 0.2C/decade over the last 30 years

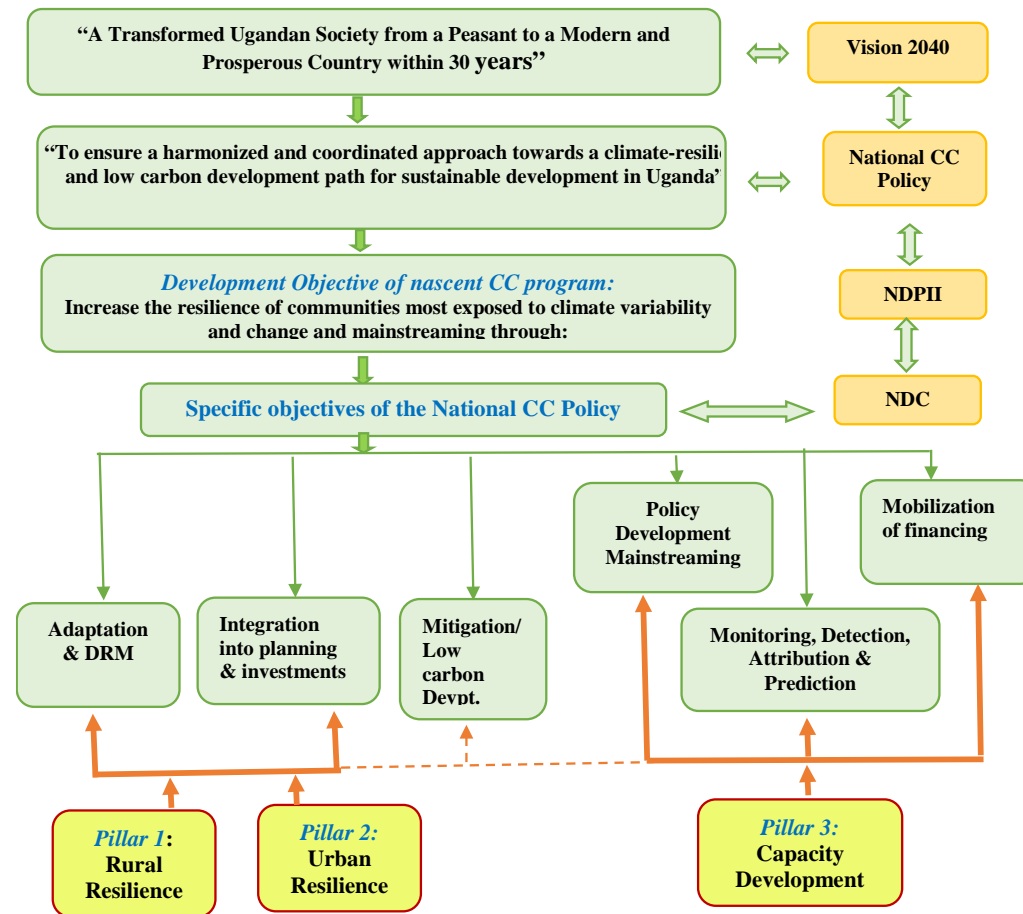

1. Country Context – challenges

- **Higher temperature**
more frequent extreme precipitation by 2030 and beyond
- **Intensity and frequency of floods and droughts**
already impacting the economy and the rural poor
- **Deforestation and land use changes**
accelerate watershed degradation, undermine ecological services flow
- **Rapid urbanization and infrastructure deficit**
increased challenges due to climate risks
 - If not addressed, climate risk could cost Uganda 2-4% annual reduction in GDP over the coming decades.
 - But at about 1% of GDP, adaptation is much cheaper and would have significant mitigation co-benefits

1. Country Context – national policy framework

→ SPCR catalyzes implementation of the existing policy framework

2. SPCR Preparation Process

Cohesive participatory process

Implementing MDBs

- **AfDB** as lead MDB
- **World Bank**
- Joint PPCR/FIP –AfDB/WB missions

Consultations

- National level consultations (incl. Ministry of Finance and GCF focal point)
- Regional level consultations of up to 80 districts
- CSO, private and public sector, international organizations engagement

Joint SPCR/FIP Preparation Process

Joint consultation

Opportunity for maximizing synergy and options for joint projects

3. SPCR Overview – objective

Harmonize and coordinate climate resilient approaches and low carbon initiatives to promote sustainable development and a green economy

3. SPCR Overview – thematic areas & strategic pillars

5 key thematic areas

1. Climate resilient agriculture
2. Rural community resilience
3. Urban Resilience and Infrastructure
4. Hydro-meteorological services
5. Institutional capacity for climate change coordination

3 strategic pillars

- SP1: Catalyzing investments for improved rural resilience and food security
- SP 2: Improving resilience of urban communities and infrastructure
- SP 3: Strengthening the capacity to manage climate variability and change

3. SPCR Overview – PPCR investment areas

Investment area 1: Enhancing climate resilient agricultural production and food security

- **Objective:** Promote CSA practices in selected agro-ecological farming systems to incorporate good and appropriate land management practices
- **Outcome:** Improved food production and agricultural resilience to climate variability.

Investment areas 2: Strengthening rural community resilience through catchment protection and water management

- **Objective:** Protection of degraded water catchment ecosystems and supporting the development and expansion of water storage and water supply systems to address water scarcity and stress.
- **Outcome:** Improved land and water resources management, storage and supply in vulnerable communities.

3. SPCR Overview – PPCR investment areas

Investment area 3: Strengthening climate resilience of communities and infrastructure in major urban centers

- **Objective:** Develop and support implementation of standards and guidelines for Climate proofing key urban infrastructure; Investment in alternative energy efficient technologies and promote Climate resilient urban planning systems.
- **Outcome:** Improved climate-resilient urban planning and adoption of alternative energy efficient technologies

3. SPCR Overview – PPCR investment areas

Investment area 4: Strengthening hydro-meteorology and early warning systems

- **Objective:** Strengthening climate and water resources monitoring networks, capacity in modelling, forecasting and early warning systems, as well as communication and information dissemination capabilities to end users.
- **Outcome:** Strengthened capacity of hydro-met institutions to collect and analyze data, and provide quality and timely climate/weather services (SMSs, community engagement).

Investment areas 5: Enhancing institutional capacity to improve climate change coordination, mainstreaming and information flow

- **Objective:** Strengthen the coordination function of the CCD, develop CC information management systems and build capacity of Local Governments to address climate resilience issues.
- **Outcome:** Effective mainstreaming of climate change issues into development programs, and enhanced coordination and networking on climate action among state and non-state actors.

4. Theory of Change – synergy opportunity

PROJECT 1: Forest watershed/ landscape management and restoration in the Albert WMZ

PROJECT 2: Sustainable catchment management through integrated land use to improve forest cover, agriculture production and reduce poverty in the Kyoga Basin and Upper Nile WMZ

*during a post-mission retreat between FIP and PPCR country teams as well as FAO, the possibility of consolidation of the 2 projects has been discussed

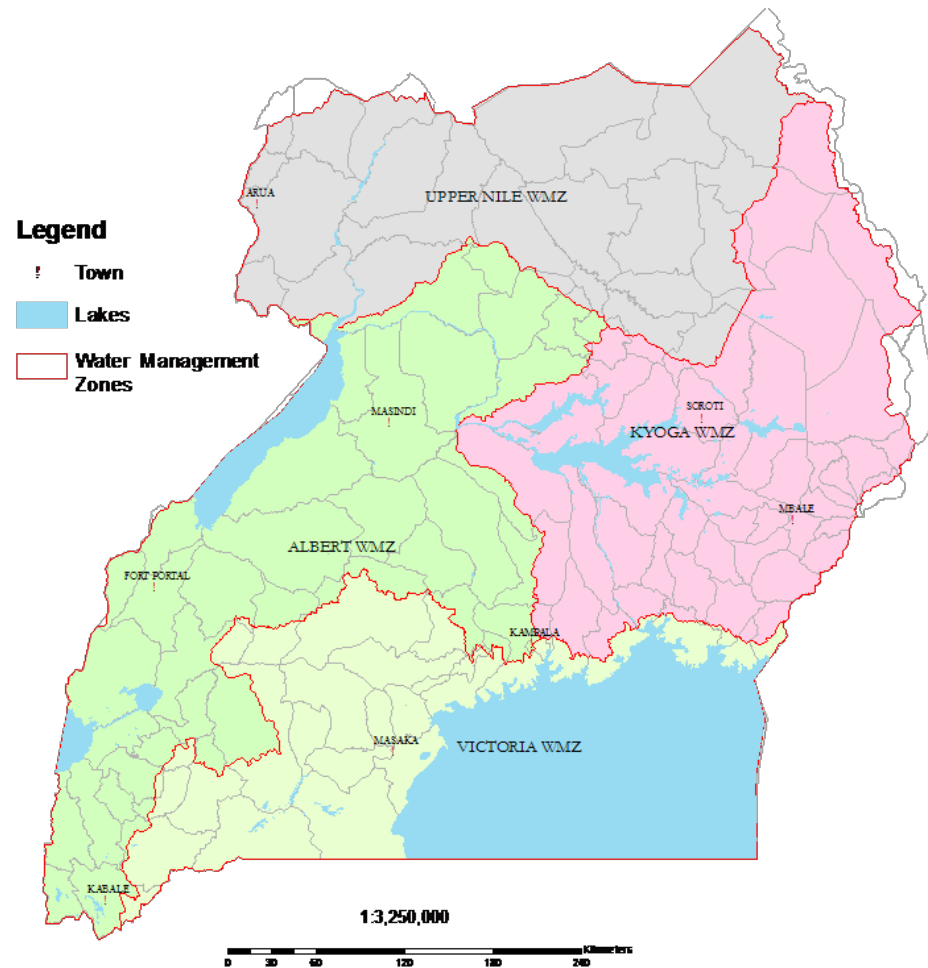

4. Theory of Change – problem & solution

Problem:

- Landslides
- Flooding
- Drought
- Deforestation/Forest Degradation (high population density, forest cover cut down)
- Shea-butter tree cut down to provide charcoal (demand higher for charcoal)

2. Solution

→ Landscape approach

4. Theory of Change – problem & solution

4. Theory of Change – overview

PROBLEM

- Effects of Climate Change
- Deforestation
- Melting of Glaciers

- Landslides
- Lack of water
- Flooding
- Droughts
- Poor livelihood/sanitation

Joint Intervention

Adaptation & Mitigation

Sustainable livelihoods =
Improved resilience +
carbon sequestration

Reduced crop failure

Biodiversity
conservation

Reforestation

Improve food
security

Increase
household
income

5. Benefits of Synergies between FIP & PPCR

Opportunities

- ☑ “Pilot opportunity” to gain and share knowledge on joint projects
- ☑ Cost-efficiency: Reduction of missions
- ☑ Time efficiency of integrating processes
- ☑ Catalytic potential
- ☑ Co-benefits
- ☑ Two MDBs (comparative advantages)

Challenges

- MDB Coordination (operational procedures)
- Which committee will fund joint projects
- M & R Coordination
- Harmonization of reporting systems for PPCR and FIP

6. Next Steps in the PPCR Process

- Finalize stakeholder consultations
- Validate SPCR and its investment projects.
- Finalize analytical studies
- Engage with the external reviewer
- Submit SPCR for June, 2017 Sub-Committee meet

7. Concluding Remarks

Key messages

- The SPCR Prioritizes investments that will have maximum impact on most vulnerable groups - in particular for agriculture and renewable natural resources (through landscape level approaches)
- Country led, country driven approach – designed to address the uniqueness of Uganda’s specific circumstances
- Uganda is in the final stages of concluding preparation of the Green Growth Development Strategy and investments under the SPCR are a vehicle to operationalize the strategy.

Request

- Uganda is aware of the uncertainty of PPCR/CIF funding, but will proceed in anticipation of potential support
- Project Preparation Grants are needed for investment projects

Thank you!
