

CLIMATE INVESTMENT FUNDS

Results Frameworks
Forest Investment Program (FIP) – logic model
June 2010

Existing Results Frameworks

CIF

CTF, SREP, PPCR

All different due to different styles but all derived from common LFA source

PPCR: logical model and performance measurement framework

SREP: Results based logical framework approach

CTF: Hybrid logic model with focus on indicators

Results Levels

Require harmonization: common labels, structure, and presentation

Require integration: link projects – programs – funds – overall CIF

Process

Revisit intent of funds and programs from strategic planning perspective

Ensure results statements capture expected results with precision and clarity

Technical reformulation process to repackage existing (and FIP) frameworks into harmonized and integrated set of frameworks

Purpose —

To provide the Trust Fund and respective Sub-Committees with a tool/instrument to monitor and evaluate the implementation of the Trust Funds and the targeted programs

Harmonization—

Harmonization means that all frameworks using the same labels, having the same structure, and having a similar presentation

Integration —

Integration means how do the various results frameworks relate to each other and “fit together”. A results chain that links expected results at the overall CIF level with a cause and effect logic , to results at the CTF and targeted programs level.

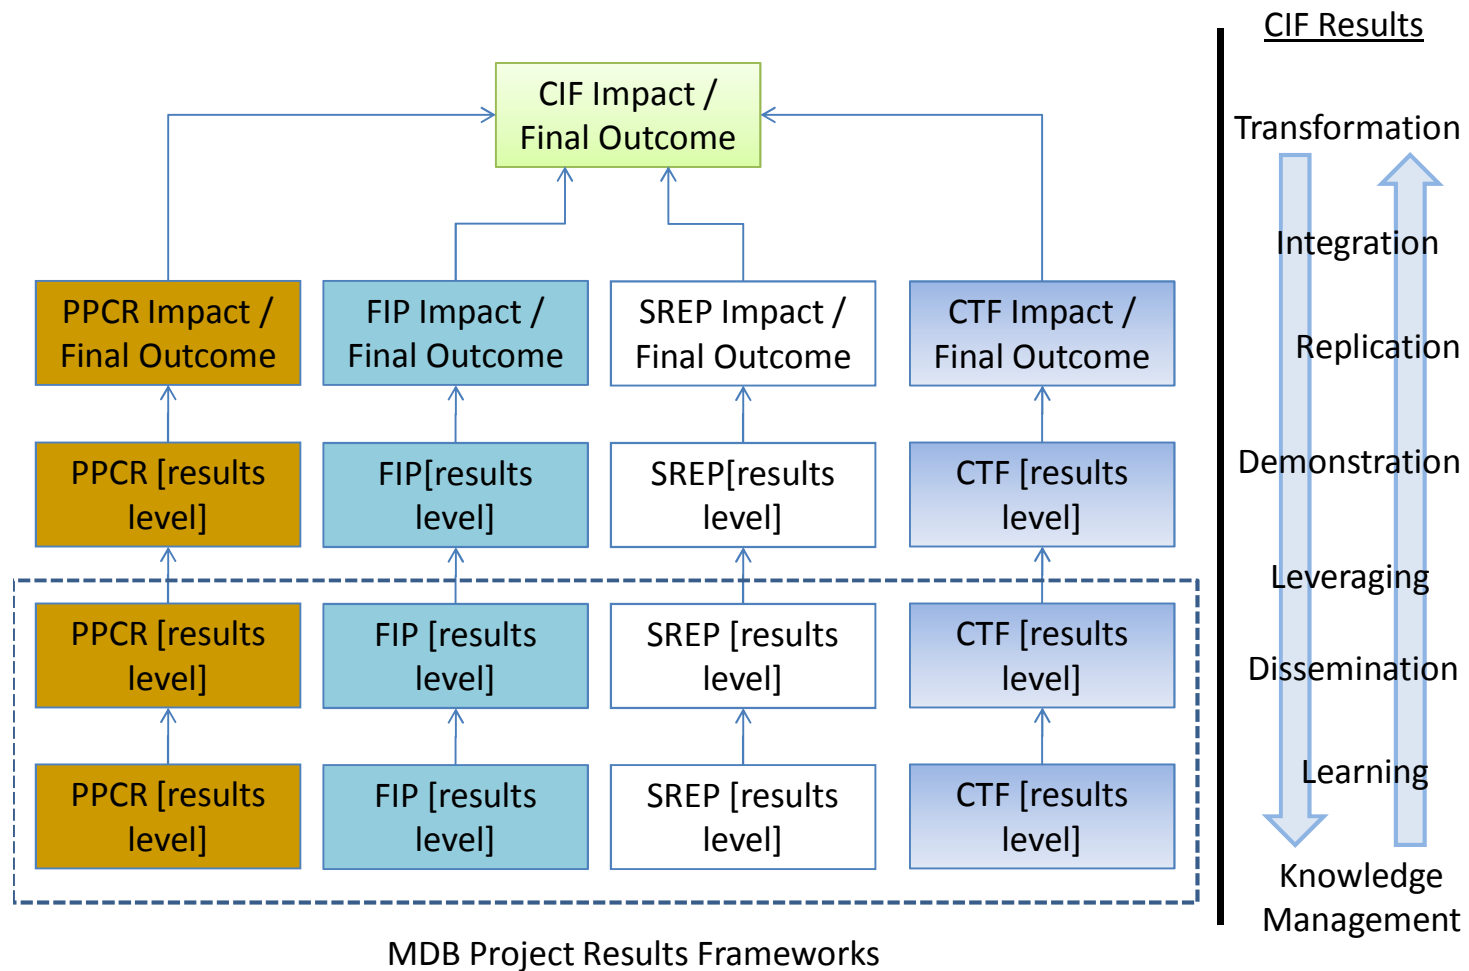

3 Step Process

- Agreement on results chains – logic model
- Identification of indicators, targets, baselines – results frameworks
- Who is doing what and when? – Performance Measurement Strategies

Results Framework Architecture

CIF

FOREST INVESTMENT PROGRAM (FIP)

CIF

CIF Final Outcome

Improved low carbon, climate resilient development

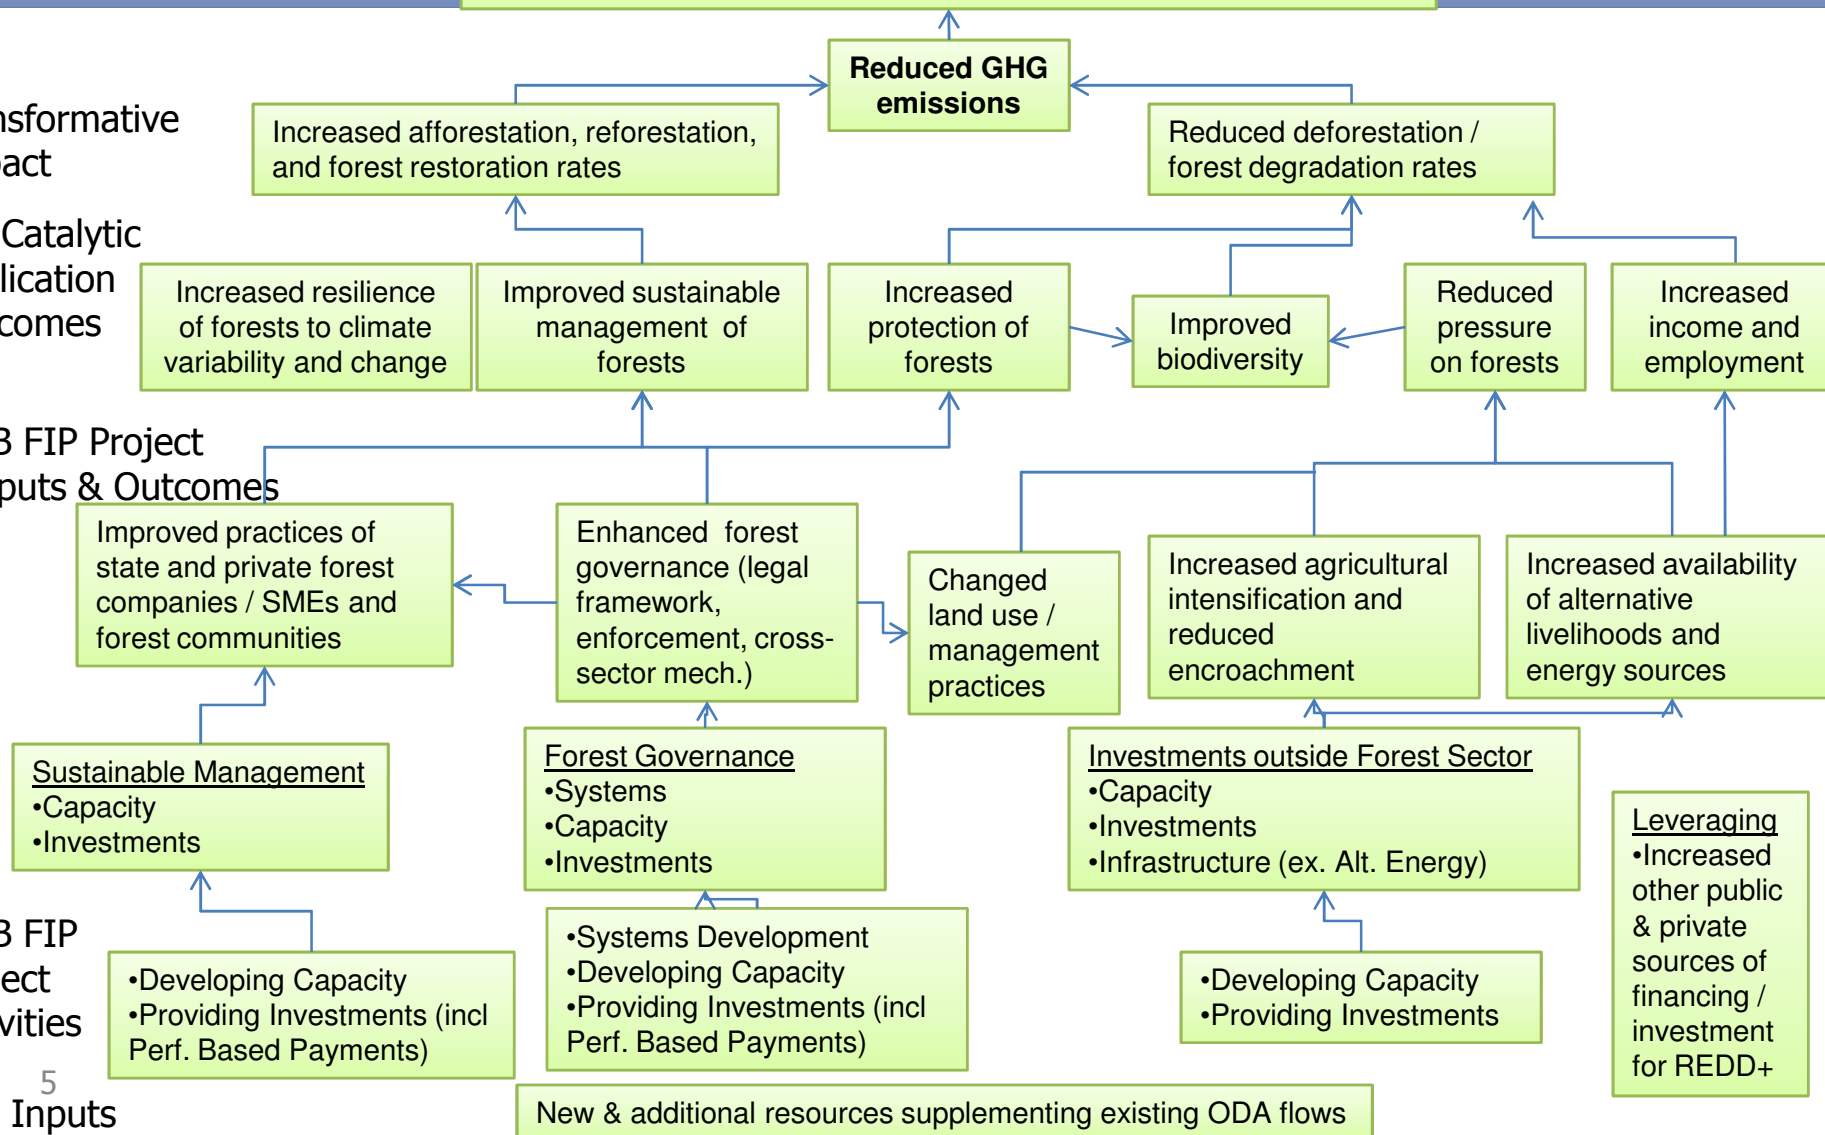

FIP
Transformative
Impact

FIP Catalytic
