**Comments from the United States on the Approval of CTF Funding for the AfDB/IBRD  
South Africa: Eskom Renewables Support Project**

Dear colleagues:

We are supportive of the views expressed by Germany and Australia. We also look forward to better understanding the factors underpinning the assumption that projects would result in a four and five fold replication in capacity by 2013 respectively. We are specifically looking to see economic analysis showing how wind and solar could be replicable in the future.

Regards, Dan
